SITE SUMMARY

The Queens Road at VatuKarasa is threatened by the increasing climate risks of coastal flooding, storm surges, coastal erosion and land-based stormwater flooding.

Working with the local community and government partners a range of nature-based resilience actions have been prioritised to mitigate these risks.

ACTIONS IMPLEMENTED

- **Mangrove Restoration:** Mangroves to be planted
- **Restoration & revegetation:** 9,362 trees planted across the VatuKarasa site to reduce coastal and stormwater flood impact
- **Rock Revetments:** 1,800sq/m of rock revetments supported or established
- **Community training:** 200 community members involved in restoration and revegetation
- **Materials & equipment:** Nursery stock, planting and fencing tools secured for on-ground works
- **Partnership:** Joint planning with Fiji Roads Authority to guide site activities
